

RESIN-SET DRS® BRUSHWARE

Proven to be the world's most effective and reliable method of filament retention, Resin-Set DRS® was pioneered by Hillbrush in 1986. Resin-Set DRS® minimises filament loss, which is essential in the food manufacturing industry. All components in this range are FDA/EU food contact approved.

HOW IT WORKS

DID YOU KNOW?

Our Resin-Set DRS® products undergo an extensive process at our factory to ensure that the resin fills every void, eliminating areas where dirt and mould can accumulate and bacteria can spread.

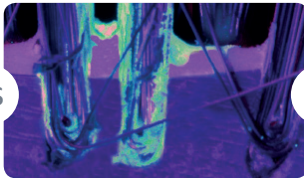

HOW IT PERFORMS

Resin-Set was tested against two competitor brushes.

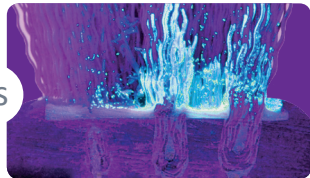

FUSED SECURITY UNIT
Bacteria harboured on the brush and multiplied in the filament cavity, where it could not be cleaned.

VS

IMITATION RESIN-SET
Resin floated on the surface of the brush, with the filament cavity vulnerable to bacteria.

VS

HILLBRUSH RESIN-SET DRS®
Bacteria could not get into the brush. Cleaning and sanitising the product removed all bacteria.
